SUBJECT INDEX

NOTE: This subject index is a modification of the system of coordinate indexing (see *Coordinate Indexing:* M. Taube and Associates, Documentation Incorporated, 1953) using unit terms rather than cross references.

The user, rather than the indexer, determines what terms he wishes to coordinate. By looking up each of these and noting the serial numbers that are common, he can find the abstracts that combine the items. The index may be used in the usual way for single item search. Index references are the serial numbers of these abstracts.

Due to the short time available for preparation of the index, many compromises in unit terms have been necessary, and frequently general rather than specific entries have been used.
